Attention please!

The information given in this data sheet shall in no event be regarded as a guarantee of conditions or characteristics (“Beschaffenheitsgarantie”). With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights of any third party.

Information

For further information on technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies Office or representatives (**http://www.infineon.com**).

Warnings

Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office or representatives.

Infineon Technologies Components may only be used in life-support devices or systems with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.

Table of Contents

CIPOS™
Control integrated Power System

Single In-Line Intelligent Power Module

3Φ-bridge 600V / 12A @ 25°C

Features

- Fully isolated Single In-Line molded module
- TrenchStop® IGBTs with lowest $V_{CE(sat)}$
- Optimal adapted EmCon™ diode for low EMI
- Integrated bootstrap diode and capacitor
- Rugged SOI gate driver technology with stability against transient and negative voltage
- Temperature monitor and over temperature shutdown
- Overcurrent shutdown
- Undervoltage lockout at all channels
- Matched propagation delay for all channels
- Low side emitter pins accessible for all phase current monitoring (open emitter)
- Cross-conduction prevention
- Lead-free terminal plating; RoHS compliant
- Qualified according to JEDEC[1] (high temperature stress tests for 500h) for target applications

Target Applications

- Washing machines
- Consumer Fans and Consumer Compressors

Description

The CiPoS™ module family offers the chance for integrating various power and control components to increase reliability, optimize PCB size and system costs.

This SIL-IPM is designed to control AC motors in variable speed drives for applications like air conditioning, compressors and washing machines. The package concept is specially adapted to power applications, which need extremely good thermal conduction and electrical isolation, but also EMI-save control and overload protection. The features of Infineon TrenchStop® IGBTs and EmCon™ diodes are combined with a new optimized Infineon SOI gate driver for excellent electrical performance.

System Configuration

- 3 halfbridges with TrenchStop® IGBT & FW-EmCon™ diodes
- 3Φ SOI gate driver
- Bootstrap diodes for high side supply
- Integrated 100nF bootstrap capacitance
- Temperature sensor, passive components for adaptions
- Isolated heatsink
- Creepage distance 3.1mm

Pin Assignment

Pin Number	Pin Name	Pin Description
1	VB3	high side floating IC supply voltage
2	W,VS3	motor output W, high side floating IC supply offset voltage
3	n.a.	None
4	VB2	high side floating IC supply voltage
5	V,VS2	motor output V, high side floating IC supply offset voltage
6	n.a.	None
7	VB1	high side floating IC supply voltage
8	U,VS1	motor output U, high side floating IC supply offset voltage
9	n.a.	None
10	V+	positive bus input voltage
11	n.a.	None
12	VRU	low side emitter
13	VRV	low side emitter
14	VRW	low side emitter
15	/HIN1	input gate driver high side 1/U
16	/HIN2	input gate driver high side 2/V
17	/HIN3	input gate driver high side 3/W
18	/LIN1	input gate driver low side 1/U
19	/LIN2	input gate driver low side 2/V
20	/LIN3	input gate driver low side 3/W
21	ITRIP	input overcurrent shutdown
22	VDD	module control supply
23	VSS	module negative supply
24	EN	input logic enable, output temperature monitoring

Pin Description

/HIN1,2,3 and /LIN1,2,3 (Low side and high side control pins, Pin 15 - 20)

These pins are active low and they are responsible for the control of the integrated IGBT The Schmitt-trigger input threshold of them are such to guarantee LSTTL and CMOS compatibility down to 3.3V controller outputs. Pull-up resistor of about 75 kOhm is internally provided to pre-bias inputs during supply start-up and a zener clamp is provided for pin protection purposes. Input schmitt-trigger and noise filter provide beneficial noise rejection to short input pulses.

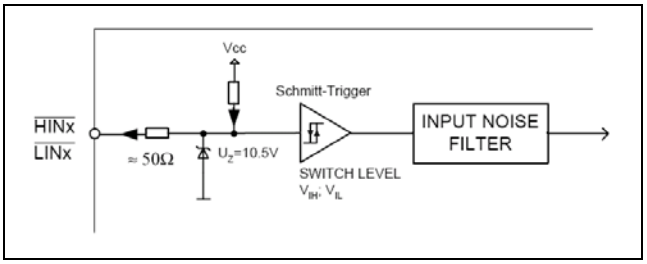

Figure 2: Input pin structure

It is recommended for proper work of CiPoS™ not to provide input pulse-width lower than 1us.

The integrated gate drive provides additionally a shoot through prevention capability which avoids the simultaneous on-state of two gate drivers of the same leg (i.e. HO1 and LO1, HO2 and LO2, HO3 and LO3).

A minimum deadtime insertion of typ 325ns is also provided, in order to reduce cross-conduction of the external power switches.

EN (enable, Pin 24)

The signal applied to pin EN controls directly the output stages. All outputs are set to LOW, if EN is at LOW logic level. The internal structure of the pin is the same as Figure 1 made exception of the switching levels of the Schmitt-Trigger, which are here $V_{EN,TH+}$ = 2.1 V and $V_{EN,TH-}$ = 1.32 V. The typical propagation delay time is t_{EN} = 700 ns.

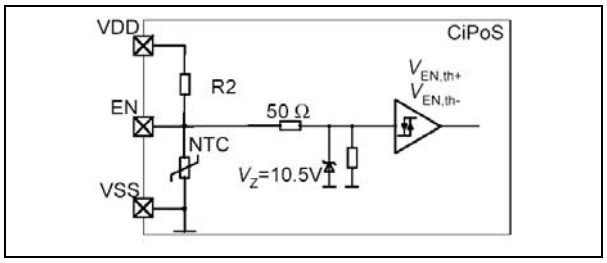

Figure 3: Internal Circuit at pin EN

This pin may also be used for reading out the temperature close to the gate drive IC. Please refer to section “Integrated Components” for the specification of the integrated parts.

ITRIP (Over-current detection function, Pin 21)

CiPoS™ provides an over-current detection function by connecting the ITRIP input with the motor current feedback. The ITRIP comparator threshold (typ 0.45V) is referenced to VSS ground. A input noise filter (typ: $t_{ITRIPMIN}$ = 225ns) prevents the driver to detect false over-current events.

Over-current detection generates a hard shut down of all outputs of the gate driver after the shutdown propagation delay of typically 690ns.

The fault-clear time is set to typically to 2ms.

VDD, VSS (control side supply and reference, Pin 22, 23)

VDD is the low side supply and it provides power both to input logic and to low side output power stage. Input logic is referenced to VSS ground as well as the under-voltage detection circuit.

The under-voltage circuit enables the device to operate at power on when a supply voltage of at least a typical voltage of V_{DDUV+} = 11.9 V is at least present.

The IC shuts down all the gate drivers power outputs, when the VCC supply voltage is below V_{DDUV-} = 10.3 V. This prevents the external power switches from critically low gate voltage levels during on-state and therefore from excessive power dissipation.

VB1,2,3 and VS1,2,3 (High side supplies, Pin 1, 2, 4, 5, 7, 8)

VB to VS is the high side supply voltage. The high side circuit can float with respect to VSS following the external high side power device emitter/source voltage.

Due to the low power consumption, the floating driver stage is supplied by an integrated bootstrap circuit connected to VDD. This includes also

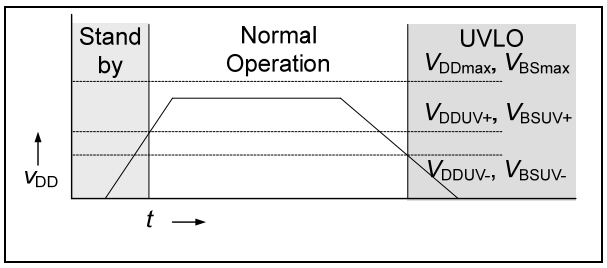

Figure 4: Input filter timing diagram

integrated bootstrap capacitors of 100 nF at each floating supply, which are located very close to the gate drive circuit.

The under-voltage detection operates with a rising supply threshold of typical V_{BSUV+} = 11.9 V and a falling threshold of V_{DDUV-} = 10.3 V according to Figure 4.

VS1,2,3 provide a high robustness against negative voltage in respect of VSS of -50 V. This ensures very stable designs even under rough conditions.

VRU, VRV, VRW (low side emitter, Pin 12, 13, 14)

The low side emitters are available for current measurements of each phase leg. It is recommended to keep the connection to pin VSS as short as possible in order to avoid unnecessary inductive voltage drops.

V+ (positive bus input voltage, Pin 10)

The high side IGBT are connected to the bus voltage. It is recommended, that the bus voltage does not exceed 500 V.

Absolute Maximum Ratings

(T_c = 25°C, if not stated otherwise)

Module Section

Description	Condition	Symbol	Value		Unit
			Min	max	
Storage temperature range		T_{stg}	-40	125	°C
Operating temperature control PCB[1]		T_{PCB}	-	125	°C
Solder temperature	Wave soldering, 1.6mm (0.063in.) from case for 10s	T_{sol}	-	260	°C
Insulation test voltage	RMS, f=50Hz, t =1min	V_{ISOL}	2500	-	V
Mounting torque	M3 screw and washer	M_S	-	0.6	Nm
Mounting pressure on surface	Package flat on mounting surface	N_{MC}	-	150	N/mm²
Creepage distance		d_S	3.1	-	mm
External bootstrap capacitor	single capacitor charging, VDD = 20V	$C_{bs,ext}$		2	µF

IGBT and Diode Section

Description	Condition	Symbol	Value		Unit
			min	max	
Collector-Emitter breakdown voltage[2]	V_{GE}=0V, I_C = 0.25mA, t_p < 250ns	$V_{(BR)CES}$	600	-	V
DC output current	T_c = 25°C,T_{vJ} < 150°C T_c = 80°C,T_{vJ} < 150°C	I_u, I_v, I_w	-12 -6	12 6	A
Repetitive peak collector current	t_p limited by T_{vJmax}	I_u, I_v, I_w	-18	18	A
Short circuit withstand time[3]	V_{DD} = 15V,$V_{DC} \leq$ 400V, $T_j \leq$ 150°C	t_{sc}	-	5	µs
Power dissipation per IGBT	T_c = 25°C	P_{tot}	-	35	W
Operating junction temperature range	IGBT Diode	T_{vjI} T_{vjD}	-40 -40	150 150	°C

[1] Monitored by pin 24
[2] For static operation with biased High-Side VS is reduced by 50V.
[3] Allowed number of short circuits: <1000; time between short circuits: >1s.

Description	Condition	Symbol	Value			Unit
			min	typ	max	
Single IGBT thermal resistance, junction-case		R_{thJC}	-	-	3.0	K/W
Single diode thermal resistance, junction-case		R_{thJCD}	-	-	4.2	

Control Section

Description	Condition	Symbol	Value		Unit
			min	max	
Module supply voltage		V_{DD}	-1	20	V
High side floating supply voltage (VB vs. VS)		V_{BS}	-1	20
